- *Coordination of assumptions, procedures, data, networks, and outputs for project traffic review during the access request process will be maintained throughout the evaluation process.*
- *Full compliance with all MLOU requirements does not obligate the Acceptance Authorities to accept/approve the interchange access request.*

1.0 Introduction and Project Description

A. Provide background or supporting information that explains the basis for the request.

The Florida Department of Transportation (Requestor) is preparing an Interchange Justification Report (IJR) for the consideration of a proposed interchange with Interstate 95 (I-95) and Central Blvd. located in the City of Palm Beach Gardens, Palm Beach County, Florida. The purpose of this study is to establish the need and justification for the proposed interchange through the preparation of an IJR.

This document will serve as the Methodology Letter of Understanding (MLOU) between the Florida Department of Transportation (FDOT) District Four Interchange Review Committee (DIRC), and the Federal Highway Administration (FHWA). The MLOU has been developed in accordance with the FDOT Policy No. 000-525-015-g: Approval of New or Modified Access to Limited Access Facilities on the Strategic Intermodal System (SIS), FDOT Procedure No. 525-030-160-i: New or Modified Interchanges, and the FDOT Traffic Forecasting Handbook.

B. Purpose and Need Statement

Provide the Purpose, the Need, and the Goals and Objectives.

The purpose of the project is to improve regional mobility and overall traffic operations by examining improvements at the existing interchanges between Northlake Boulevard and Donald Ross Road along I-95, including at SR 786 (PGA Boulevard), as well as consideration of new interchange access within these limits, with focus on Central Boulevard and I-95, or Hood Road and I-95. The purpose is to achieve acceptable (LOS D) regional Levels of Service (LOS) in the future condition. The need for the project is based on the following primary and secondary criteria:

PRIMARY CRITERIA

CAPACITY/TRANSPORTATION DEMAND: Improve Operational Capacity and Overall Traffic Operations (Level of Service)

The project is anticipated to improve traffic operations at the PGA Boulevard interchange and study area roadways/intersections by implementing regional operational and capacity improvements to meet the future travel demand projected as a result of Palm Beach County population and employment growth. According to traffic data presented in the I-95 Area Wide Mobility Study, the northbound I-95 ramp terminal intersection at PGA Boulevard is currently operating at LOS E/F (AM/PM Peak Hours) and the intersection of PGA Boulevard at Military Trail is currently operating at LOS E (AM/PM Peak Hours). By year 2035, if no improvements occur, several additional locations are projected to deteriorate to unacceptable conditions, including the southbound I-95 ramp terminal intersection at PGA Boulevard to LOS F (PM Peak Hour), the intersection of PGA Boulevard and Central Boulevard to LOS F (AM/PM Peak Hours) and the intersection of PGA Boulevard at Florida's Turnpike to LOS F (AM/PM Peak Hours).

An Interchange Justification Report for a new interchange at Central Boulevard was completed in 2009 by Palm Beach County. It recommended the construction of a new

interchange along with the removal of the partial interchange ramps for I-95 at Military Trail to preserve interchange spacing requirements. At the two flanking interchanges (PGA Boulevard and Donald Ross Road), looking at intersection LOS at the two signalized ramp intersections (east side and west side), in two time periods (AM and PM) - a total of eight analyses, when comparing the No-Build and Build conditions in 2032, adding the new interchange at Central Boulevard improved the LOS by one letter grade in 3 instances, provided no change in 4, and degraded the LOS in one. The 2009 interchange proposal was not accepted by FDOT. In addition to revisiting the effect of a new interchange on existing interchange operations, this IJR will give additional attention to regional mobility issues

GROWTH MANAGEMENT: Accommodate Future Population and Employment Growth

The area surrounding the existing I-95 and PGA Boulevard interchange is urbanized containing a mixture of commercial, industrial, mixed-use and residential land uses with vacant land in the northeast quadrant. According to the City of Palm Beach Gardens Comprehensive Plan, future land use is to remain relatively unchanged, with the exception of the area east of the interchange which has been designated as part of the Bioscience Research Protection Overlay (BRPO). The BRPO was developed to protect portions of land for biotechnology/biosciences land uses and includes the Scripps Florida Phase II/Briger Tract DRI which consists of 82 acres located south of Donald Ross Road, north of Hood Road and east and west of I-95 (just north of the study area). The DRI includes 1,600,000 square feet of Biotech Research and Development, 2,400,000 square feet of biotechnological/ biomedical, pharmaceutical, and office space, 2,700 residential dwelling units, and 500,000 square feet of retail space. According to SERPM projections developed for Palm Beach County as part of the Palm Beach MPO 2035 LRTP development: - Population is projected to grow from 1,270,302 in 2005 to 1,677,170 in 2035 [32% increase]. - Employment is projected to grow from 544,496 in 2005 to 800,045 in 2035 [46.9% increase]. The improvements will be critical in supporting the growing bioscience industry and vision of the County, as well as the expanding residential, commercial and industrial uses in the vicinity of the interchange.

SECONDARY CRITERIA

MODAL INTERRELATIONSHIPS: Enhance Freight Mobility

I-95 is the primary interstate route along the east coast of the United States extending from Maine to Florida and serving some of the most populated urban areas in the country. In Florida, I-95 is a designated Strategic Intermodal System (SIS) highway. The SIS is a statewide network of highway, railway and waterway corridors as well as transportation hubs that handle the bulk of Florida's passenger and freight traffic. Highways that are designated as part of the SIS provide for movement of high volumes of goods and people at high speeds. Within southeast Florida, I-95 is a vital north-south transportation corridor providing important regional access to major east/west and north/south transportation corridors, as well as residential and employment activity centers and other regional destinations in the area. The proposed improvements at the I-95 and PGA Boulevard interchange and surrounding roadways/intersections are critical to enhance the mobility of goods by alleviating current and future congestion at the interchange and on the surrounding freight network. Reduced congestion will serve to maintain and improve viable access to the major transportation facilities and businesses of the area (including connectors to freight activity centers/local distribution facilities or between the regional freight corridors).

EMERGENCY EVACUATION: Enhance Emergency Evacuation and Response Times

I-95 and PGA Boulevard serve as part of the emergency evacuation route network designated by the Florida Division of Emergency Management. Also designated by Palm Beach County and the City of Palm Beach Gardens as evacuation facilities, I-95 and PGA Boulevard are critical in facilitating traffic during emergency evacuation periods as they connect other major arterials and highways of the state evacuation route network. The project is anticipated to:

- Improve emergency evacuation capabilities by enhancing connectivity and accessibility to I-95 and other major arterials designated on the state evacuation route network.
- Increase the operational capacity of traffic that can be evacuated during an emergency event.

C. *Project Location*

Provide a description of the interchange access request study area

Moving from south to north, the approximate milepost numbers along I-95 (Section 93220000) at the centerlines of the various cross roads (and the spacing between them in miles) are as follows:

Northlake Blvd. – 34.78
Spacing – 2.22
PGA Blvd. – 37.00
Spacing – 0.40
Military Trail – 37.40
Spacing – 1.02
Central Blvd. – 38.42
Spacing – 0.55
Hood Rd – 38.97
Spacing – 1.41
Donald Ross Rd. – 40.38

Exhibit /Figure #1 Project Location attached ☒

D. *Area of Influence*

Along mainline: Between Northlake Blvd. and Donald Ross Rd.

Along crossroads: The major intersections (minor ones such as Donald Ross Rd. at Heights Blvd., or PGA Blvd. at Shady Lakes Dr. were ignored) of:
Donald Ross Rd. between 64th Dr. N. and Military Trail;
Hood Rd. between Eastpointe Blvd. and Military Trail;
PGA Blvd. between the Turnpike and Lake Victoria Gardens;
Northlake Blvd. between Keating Dr. and Sandtree Ln; and
Central Blvd. between PGA Blvd. and Donald Ross Rd.

Exhibit/Figure #2 Area of Influence attached ☒

E. *Project Schedule*

Identify the schedule of production activities consistent with a proposed conceptual funding plan and opening year.

The anticipated schedule is aimed at submittal of the Final Interchange Proposal in early July, 2014, and completion of the Project Development and Environmental

(PD&E) report by June 1, 2015. The Final Interchange Proposal will be completed before the initiation of the PD&E Study, so that the scope of the PD&E can be established first. This is the reason for the separate completion dates of this phased improvement study.

2.0 Analysis Years

Traffic Operational Analysis will be conducted for the following years:

- Existing year **2013**
- Opening year 2020
- Interim year(s) 2030
- Design year 2040

Traffic Forecasting will be conducted on a 2040 model approved for use in the I-95 PD&E. Traffic will be Forecasted for the following years and then interpolated for the other traffic operational analysis years:

- Base year 2010
- Model Year 2040
- Horizon years 2040

3.0 Considered Alternatives

All Alternatives		Year of Analysis			
		Existing	*Opening*	*Interim*	*Design*
	No Build	☒	☒	☒	☒
Build	**Preferred Alternative**	☐	☒	☒	☒
Build	**Other Alternatives**	☐	☒	☒	☒
	TSM&O Alternative	☐	☒	☒	☒

☐ Requestor has developed specific alternative(s) at this point and the alternative(s) are described below.

Exhibit/Figure # attached ☐

☒ Build alternatives that were eliminated from consideration or evaluated within the PD&E process and discarded, will be documented as to why they were not carried forward.

4.0 Data Collection

The type of data that may be used should be identified.

A. Transportation System Data
Straight Line Diagrams, signal timing information, aerial photos, field inspection, Property Appraiser data, Comprehensive Plan Transportation Elements, Recently

adopted Functional Class determination have been assembled for use during this study.

B. Existing and Historical Traffic Data
Historical traffic data from FDOT and Palm Beach County. Existing traffic data (turning movement counts – some 8 hours on one day, some 24 hours over three days), 72 hour volume counts collected at selected arterial locations and some interchange ramps, and 72 hour classification counts collected at some interchange ramps. Counts were collected in April and May, 2013.

C. Land Use Data
Future Land Use Elements from the Palm Beach County and City of Palm Beach Gardens Comprehensive Plans. Model related socio-economic data forecasts agreed on by the MPO. Approved developments not reflected in any of the above.

D. Environmental Data
Environmental data contained in the Florida Natural Areas Inventory (FNAI), records documenting hazardous or contaminated properties from the Florida Department of Environmental Protection and Palm Beach County, and historical/cultural resource records of the State Historic Preservation Office, as well as the National Register of Historic Places will all be considered during this study.

E. Planned and Programmed Projects
Programmed Improvements: the MPO's current Transportation Improvement Program (TIP), and the Capital Improvement Elements from the Comprehensive Plans of Palm Beach County and the City of Palm Beach Gardens. Commitments from Development Agreements. Planned Improvements: the MPO's Long Range Transportation Plan (LRTP) and the SIS Cost Feasible Plan.

5.0 Travel Demand Forecasting

A. Selected Travel Demand Model(s)

The Southeast Regional Planning Model (SERPM) version 6.5 is the version that was used to update the three MPO LRTPs to 2035 conditions. It was validated to 2005 conditions. SERPM v6.5 was the basis for a subarea model used for the I-95 Corridor Planning Study (CPS), and that model bore the same name: I-95 CPS. For the I-95 PD&E effort, this sub-area model was further refined to a tight sub-area model. The I-95 PD&E tight sub-area model followed I-95 as far north as Linton Blvd., and included the first arterial intersections east and west of the ramp terminals at each interchange. The FDOT has extended the tight sub-area model northward to Indiantown Road for this IJR, and broadened it through the IJR study area to include *most* of the major intersections within it. This is a trip based model that contains no traffic analysis zones north of the Palm Beach County/Martin County border.

B. Project Traffic Forecast Development Methodology
Describe the methodology and assumptions in developing the future year alternative travel demand models and methodology and software to be applied to develop future year project traffic (AADTs and DDHVs).

This model produces three separate assignments: a three hour AM peak period, a three hour PM peak period, and a third assignment containing the sum of all the off-peak hours in the day. The directional balance in volumes typically observed in a daily model is absent here, and the directionality of traffic in the peak periods is evident in the assignment volumes.

C. Validation Methodology
☒ Utilizing current FDOT procedures in data collection.

Procedure: The validation work for the I-95 PD&E study was done on a 2010 network. The 2010 zonal contents used in this model were not Census based, but rather an interpolation between the 2005 zonal contents and 2035 zonal contents developed for SERPM 6.5 and approved by the respective MPOs as part of the last LRTP update process. 2010 Census based estimates at the TAZ level were not yet approved for use when this effort occurred. Similarly, the 2040 zonal contents used in the I-95 PD&E effort were not the same as the 2040 zonal contents being developed by the MPOs for the next update of their LRTPs; the work effort on the I-95 PD&E preceded the approval for use of the new 2040 data sets. Rather, the 2040 zonal data sets used in the I-95 PD&E work contain extrapolations beyond the approved 2035 zonal contents.
One of the refinements to this subarea model was the use of CUBE Analyst to make adjustments to the O-D table that is the output of the trip distribution step in ways that improved the agreement between the model assignment volumes in the validation year and traffic counts. Unlike historical models, for which validation was performed using daily traffic counts as the basis of comparison, the aforementioned adjustments to the O-D table were made seeking better agreement in peak period volumes (assignment versus counted). For this reason, peak period volumes are the most reliable output from this model.

- Identify how modifications to the travel demand forecasting model will be made, including modifications to the facility type and area type for links, modifications to socio-economic data and all input and output modeling files for review.

The FDOT has previously used this model for the I-95 PD&E (Stirling Rd. to Linton Blvd. – Corridor Design Traffic Report, November 2012), which was reviewed and accepted by the FHWA. Documentation of any modifications that were made to the model can be provided if needed under separate cover.

D. Adjustment Procedures
Identify the process used to adjust modeled future year traffic to the defined analysis years. Discuss how trends/growth-rates will be factored into this.

As mentioned above, because peak period volumes are the most reliable output of

the model, in the I-95 PD&E the traditional factoring of model daily volumes down to peak hour directional volumes through the use of K and D factors was not used. Peak period volumes were used directly, subject to reasonableness checks. This will also be the approach used in this IJR.

The model's peak period output does need to be converted to a peak hour volume. The developer of the tight sub-area model used the term "diurnal factor" to describe the peak hour's fraction of the three hour peak period. The developer noted sufficient spatial stability in this factor to use only one in all locations, with a separate factor for the AM and PM peak periods. This estimation work was done for mainline locations. Absent a suggestion from the model developer, the two diurnal factors for AM and PM from the PD&E work will be used for all peak period assignment volumes, mainline or arterial, in this IJR.

Opening (2020) and interim (2030) year peak hour volumes will be interpolations (assuming exponential growth) between 2013 existing condition peak hour volumes and 2040 horizon/design year peak hour volumes. The growth rate in traffic volumes necessary to reach 2040 model volumes will be compared with the growth rate in land use intensity implicit in a comparison of the 2010 and 2040 socio-economic data sets used in the base year and horizon year simulation models. The historic trend in traffic volume growth is not a reliable source for comparison here due to the influence of the recession and the impending limit on future development as the county approaches build out.

E. Traffic Factors

☒ Utilizing recommended ranges identified in the Project Traffic Forecasting Handbook and Procedure (525-030-120).

☒ Utilizing other factors, identified below

Roadway	K	D	T	T_f	PHF	MOCF
I-95	N/A	N/A	7.5	3.7	0.95	N/A
All Arterials	N/A	N/A	3.4	1.7	0.95	N/A

Source: I-95: FDOT Sta. 2187 (N of PGA Blvd), 2012. Arterials: FDOT Sta. 5300 (PGA Blvd. E. of I-95), 2012.

6.0 Traffic Operational Analysis

The area type, traffic conditions, and analysis tools to be used are summarized in this section.

A. Area Type/Traffic Conditions

Area Type	Conditions	
	Under-saturated	*Saturated*
Rural	☐	☐
Urban Areas/Transitioning Urbanized Areas	☐	☒
Urbanized Areas/Central Business District (CBD)	☐	☐

B. Traffic Analysis Software Used

SimTraffic		☐	☐	☐	☐	☐	☐
Corsim		☐	☐	☐	☐	☐	☐
Vissim		☐	☐	☐	☐	☐	☐
		☐	☐	☐	☐	☐	☐

C. Calibration

☒ Calibration methodology and parameters utilized will be documented. Any deviations will be justified.

D. Selection of Measures of Effectiveness (MOE)

- *The Level of Service criteria for each roadway classification, including mainline, ramps, ramp terminal intersections and the cross road beyond the interchange ramp terminal intersections are identified below.*
  The LOS threshold will be consistent with FDOT procedures and be LOS "D" for all conditions. The methods used will be according to the 2010 Highway Capacity Manual.

- *In addition to the Level of Service criteria, state other operational criteria to be utilized for the evaluation of alternatives, including ramp queue lengths, arterial level of service, etc.*
  Average arterial speed, intersection delay, queue lengths.

7.0 Safety Analysis

☒ Detailed crash data within the study area will be analyzed and documented.
Years: 2006 - 2011
Source: FDOT Crash Analysis Report Database

8.0 Consistency with Other Plans/Projects

☒ The request will be reviewed for consistency with facility Master Plans, Actions Plans, SIS/ FIHS Plan, MPO Long Range Transportation Plans, Local Government Comprehensive Plans or development applications, etc.

☒ Where the request is inconsistent with any plan, steps to bring the plan into consistency will be developed.

☒ The operational relationship of this request to the other interchanges will be reviewed and documented. The following other Interchange Access Requests are located within the area of influence.

We are not aware of any other Interchange Access Requests currently under consideration within the area of influence.

9.0 Environmental Considerations

A. Status of Environmental Approval and permitting process

This interchange proposal is being conducted before initiating the NEPA process. Once the conclusions of this study are known, the NEPA study will commence, including determination of the class of action.

B. Identify the environmental considerations that could influence the outcome of the alternative development and selection process.

A cursory desktop review of the corridor conditions indicates low potential for environmental impact that cannot be minimized or effectively mitigated. Potential noise impacts have a moderate potential to require engagement during the NEPA phase for these improvements, but it is likely that mitigation of impacts will be possible.

10.0 Coordination

Yes	No	N/A	
☒	☐	☐	An appropriate effort of coordination will be made with appropriate proposed developments in the area.
☒	☐	☐	Request will identify and include (if applicable) a commitment to complete the other non-interchange/non-intersection improvements that are necessary for the interchange/intersection to function as proposed.
☒	☐	☐	Request will document whether the project requires financial or infrastructure commitments from other agencies, organizations, or private entities.
☒	☐	☐	Request will document any pre-condition contingencies required in regards to the timing of other improvements and their inclusion in a TIP/STIP/LRTP prior to the Interstate access acceptance (final approval of NEPA document).
☒	☐	☐	Request will document the funding and phasing.

11.0 Anticipated Design Exceptions and Variations

☒ Design exceptions are not anticipated, but as the PD&E phase of the project provides additional detail, any identified design exceptions will be noted.

☐ The following exceptions/variations to FDOT, AASHTO or FHWA rules, policies, standards, criteria or procedures have been identified:

12.0 Conceptual Signing Plan

☒ A conceptual signing and marking plan shall be prepared and included.

13.0 FHWA Policy Points

The following eight FHWA Policy Criteria (also known as 8 FHWA criteria, Doc E9-20679, dated August 22, 2009) will be specifically addressed within the requested unless identified as not applicable:

N/A	8 FHWA Criteria
☐	Policy Point 1: Need for the Access Point Revision
☐	Policy Point 2: Reasonable Alternatives
☐	Policy Point 3: Operational and Safety Analyses
☐	Policy Point 4: Access Connections and Design
☐	Policy Point 5: Land Use and Transportation Plans
☐	Policy Point 6: Future Interchanges
☐	Policy Point 7: Coordination
☐	Policy Point 8: Environmental Processes

TMTOOL INPUT SHEET

Project Description:

SECTION NO:		PREPARED BY:	
FM NO.:		FILE:	
PROJECT LIMITS:		DATE:	
DESIGN YEAR:			
INTERSECTION:	Donald Ross Rd.& 64th Dr N / E Pointe Ct		

NOTES:

Machine 1064 (W of 64th Dr. N), was also labeled as 4601.
Machine 1036 (D.Ross Rd. W/o SB I-95) was also labeled as 6301.
Only machine 1064 has AADT for the 3 daysW (4/23, 4/24, 4/25). Data was averaged.
TMC data corresponds to (4/25/2013)

Historical AADTs:

	YEAR / STATION	NORTH LEG AADT 1073	EAST LEG AADT 6301	SOUTH LEG AADT 1072	WEST LEG AADT 4601	
Actual AADT:	2004					
Actual AADT:	2005					24-HOUR TOTAL
Actual AADT:	2006					
Actual AADT:	2013	979	14,782	849	12,365	
TCRPM Volume:	2013	0	0	0	0	

Growth Rates:

	NORTH LEG		EAST LEG		SOUTH LEG		WEST LEG	
Historic Trend GR =	0.00%	CGR	0.00%	CGR	0.00%	CGR	0.00%	
Historic + Model Trend GR =	0.00%	CGR	0.00%	CGR	0.00%	CGR	0.00%	
2000 Model to 2030 Model GR =	0.00%	CGR	0.00%	CGR	0.00%	CGR	0.00%	CGR
Recommended Growth Rate:	**0.00%**	**CGR**	**0.00%**	**CGR**	**0.00%**	**CGR**	**0.00%**	**CGR**

Choose Methodology for Calculating Growth Factor on Each Leg (Input 1, 2 or 3)

1 = Compound Growth Throughout All Years
2 = Linear Growth Throughout All Years
3 = Blend of Compound First Ten Years, Linear Thereafter

			NORTH LEG		EAST LEG		SOUTH LEG		WEST LEG

PROJECT MANAGER "TURNS" REPORT

DESIGN HOUR TURNS CALCULATIONS

SECTION NO: 0
FM NO.: 0
PROJECT LIMITS: 0
DESIGN YEAR: 0
INTERSECTION: Donald Ross Rd.& 64th Dr N / E Pointe Ct
PREPARED BY: 0
FILE: 0

DATE: 1/0/1900
NOTES: Machine 1064 (W of 64th Dr. N), was also labeled as 4601.
Machine 1036 (D.Ross Rd. W/o SB I-95) was also labeled as 6301.
Only machine 1064 has AADT for the 3 daysW (4/23, 4/24, 4/25). Data was averaged.
TMC data corresponds to (4/25/2013)

ESTIMATED TWO-WAY 24 HOUR AADT FOR EACH LEG OF THE INTERSECTION:

	YEAR	FROM NORTH	FROM EAST	FROM SOUTH	FROM WEST
24 HR EST. AADT	2013	979	14,782	849	12,365

Notes:

1) Collision with Bicycle Crashes include Collision with Bicycle/Collision with Bicycle in Bike Lane (Codes 11 and 12).

2) Fixed Object Crashes include collisions with sign/sign post, utility/light pole, guardrail, fence, concrete barrier wall, bridge, pier, abutment, rail, tree, shrubbery, construction barricade/sign, traffic gate, crash attenuators, other fixed objects (incl. above road).

3) Ran-off-Road Crashes include Ran in Ditch/Culvert and Ran off road into water (Codes 29 and 30).

4) Other crashes include crashes not categorized as the crash types shown in the table.

5) Dark Crashes include both scenarios - with and without street lighting.

Notes:

1) Collision with Bicycle Crashes include Collision with Bicycle/Collision with Bicycle in Bike Lane (Codes 11 and 12).

2) Fixed Object Crashes include collisions with sign/sign post, utility/light pole, guardrail, fence, concrete barrier wall, bridge, pier, abutment, rail, tree, shrubbery, construction barricade/sign, traffic gate, crash attenuators, other fixed objects (incl. above road).

3) Ran-off-Road Crashes include Ran in Ditch/Culvert and Ran off road into water (Codes 29 and 30).

4) Other crashes include crashes not categorized as the crash types shown in the table.

5) Dark Crashes include both scenarios - with and without street lighting.

Notes:

1) Collision with Bicycle Crashes include Collision with Bicycle/Collision with Bicycle in Bike Lane (Codes 11 and 12).
2) Fixed Object Crashes include collisions with sign/sign post, utility/light pole, guardrail, fence, concrete barrier wall, bridge, pier, abutment, rail, tree, shrubbery, construction barricade/sign, traffic gate, crash attenuators, other fixed objects (incl. above road).
3) Ran-off-Road Crashes include Ran in Ditch/Culvert and Ran off road into water (Codes 29 and 30).
4) Other crashes include crashes not categorized as the crash types shown in the table.
5) Dark Crashes include both scenarios - with and without street lighting.

Hello Dave, thanks for your time. It didn't take long to realize what I missed.

Do you know or can you point me to the individuals who would know the lengths of the turn lane improvements you mentioned:

- Northlake Blvd. at Military Trail: WBRT; 320'
- PGA at Military Trail: SBRT; 450' and
- Hood Rd at Central Blvd.: SBRT 335', NBRT (TBD – 280' is stnd min), additional SBLT (TBD – 450' is stnd min), additional NBLT (TBD – 450' is stnd min).

Thanks again,

Gavin Jones, PE, AICP

Gavin,

I believe Julio Delgado is managing the Design-Build project for this interchange FM #429785-1, which had money programmed in FY 2013, 2014 & a little in 2015 to do the design and construction. A portion of the project was funded with CIGP money. Please see Julio Delgado's email below.

Thanks,

Shane,

Good afternoon.

Attached are the as-built Signing and Pavement Marking Plans from the last project done on the I-95 interchange at Donald Ross Road prior to the one your team at BCC is working on with Community Asphalt. The concept plans for the I-95 at Donald Ross Road interchange provided with the RFP for the I-95 Interchange Interim Improvements Design-Build projects and the IOAR Cesar Martinez provided you earlier today reflects the improvements Palm Beach County was planning before the FDOT took over the project due to the inclusion of the structural work at the interchange.

Please let me know if you need additional information or if you have any questions.

Thank you and best regards,

Julio C. Delgado, PE
Project Manager
FDOT District Four Design Office

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary	
HCM 2010 Ctrl Delay	107.1
HCM 2010 LOS	F

Notes

User approved ignoring U-Turning movement.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary	
HCM 2010 Ctrl Delay	79.2
HCM 2010 LOS	E

Notes
User approved ignoring U-Turning movement.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Merge Analysis

Analyst:	LRCB
Agency/Co.:	
Date performed:	3/26/2015
Analysis time period:	AM
Freeway/Dir of Travel:	I-95 Northbound
Junction:	NLake NB On Ramp
Jurisdiction:	FDOT D4
Analysis Year:	2020

Description: No Build 2020 - I-95 NB Merge at Nlake On-Ramp (N1 - N2)

Freeway Data

Type of analysis	Merge	
Number of lanes in freeway	5	
Free-flow speed on freeway	70.0	mph
Volume on freeway	5314	vph

On Ramp Data

Side of freeway	Right	
Number of lanes in ramp	1	
Free-flow speed on ramp	50.0	mph
Volume on ramp	1178	vph
Length of first accel/decel lane	400	ft
Length of second accel/decel lane		ft

Adjacent Ramp Data (if one exists)

Does adjacent ramp exist?	No	
Volume on adjacent Ramp		vph
Position of adjacent Ramp		
Type of adjacent Ramp		
Distance to adjacent Ramp		ft

Conversion to pc/h Under Base Conditions

Junction Components	Freeway	Ramp	Adjacent Ramp	
Volume, V (vph)	5314	1178		vph
Peak-hour factor, PHF	0.95	0.92		
Peak 15-min volume, v15	1398	320		v
Trucks and buses	4	3		%
Recreational vehicles	0	0		%
Terrain type:	Level	Level		
Grade	%	%	%	
Length	mi	mi	mi	
Trucks and buses PCE, ET	1.5	1.5		
Recreational vehicle PCE, ER	1.2	1.2		

Heavy vehicle adjustment, fHV	0.980	0.985	
Driver population factor, fP	1.00	1.00	
Flow rate, vp	5706	1300	pcph

Estimation of V12 Merge Areas

L_{EQ} = (Equation 13-6 or 13-7)

P_{FM} = 0.055 Using Equation 4

$v_{12} = v_F (P_{FM})$ = 240 pc/h

Capacity Checks

	Actual	Maximum	LOS F?
v_{FO}	5637	9600	No
v_3 or v_{av34}	2048 pc/h	(Equation 13-14 or 13-17)	
Is v_3 or v_{av34}	> 2700 pc/h?	No	
Is v_3 or v_{av34}	> 1.5 v_{12} /2	Yes	

If yes, v_{12A} = 1734 (Equation 13-15, 13-16, 13-18, or 13-19)

Flow Entering Merge Influence Area

	Actual	Max Desirable	Violation?
v_{12A}	5637	4600	No

Level of Service Determination (if not F)

Density, $D_R = 5.475 + 0.00734\ v_R + 0.0078\ v_{12} - 0.00627\ L_A$ = 26.0 pc/mi/ln

Level of service for ramp-freeway junction areas of influence C

Speed Estimation

Intermediate speed variable,	M_S = 0.362	
Space mean speed in ramp influence area,	S_R = 59.9	mph
Space mean speed in outer lanes,	S_0 = 67.1	mph
Space mean speed for all vehicles,	S = 63.0	mph

Diverge Analysis

Analyst:	LRCB
Agency/Co.:	
Date performed:	3/26/2015
Analysis time period:	AM Peak
Freeway/Dir of Travel:	I-95 Northbound
Junction:	EB PGA Off-Ramp
Jurisdiction:	FDOT D4
Analysis Year:	2020

Description: No Build 2020 - I-95 NB Diverge at EB PGA Off-Ramp (N3 - N4)

Freeway Data

Type of analysis	Diverge	
Number of lanes in freeway	5	
Free-flow speed on freeway	70.0	mph
Volume on freeway	6492	vph

Off Ramp Data

Side of freeway	Right	
Number of lanes in ramp	2	
Free-Flow speed on ramp	55.0	mph
Volume on ramp	2405	vph
Length of first accel/decel lane	500	ft
Length of second accel/decel lane	500	ft

Adjacent Ramp Data (if one exists)

Does adjacent ramp exist?	No	
Volume on adjacent ramp		vph
Position of adjacent ramp		
Type of adjacent ramp		
Distance to adjacent ramp		ft

Conversion to pc/h Under Base Conditions

Junction Components	Freeway	Ramp	Adjacent Ramp	
Volume, V (vph)	6492	2405		vph
Peak-hour factor, PHF	0.95	0.92		
Peak 15-min volume, v15	1708	654		v
Trucks and buses	4	3		%
Recreational vehicles	0	0		%
Terrain type:	Level	Level		
Grade	0.00 %	0.00 %		%
Length	0.00 mi	0.00 mi		mi
Trucks and buses PCE, ET	1.5	1.5		
Recreational vehicle PCE, ER	1.2	1.2		

Heavy vehicle adjustment, fHV	0.980	0.985	
Driver population factor, fP	1.00	1.00	
Flow rate, vp	6970	2653	pcph

Estimation of V12 Diverge Areas

L_{EQ} = (Equation 13-12 or 13-13)

P_{FD} = 0.260 Using Equation 0

$v_{12} = v_R + (v_F - v_R) P_{FD}$ = 3504 pc/h

Capacity Checks

	Actual	Maximum	LOS F?
$v_{Fi} = v_F$	5925	9600	No
$v_{FO} = v_F - v_R$	3272	9600	No
v_R	2653	4400	No
v_3 or v_{av34}	1210 pc/h	(Equation 13-14 or 13-17)	
Is v_3 or v_{av34}	> 2700 pc/h?	No	
Is v_3 or v_{av34}	> 1.5 v_{12} /2	No	

If yes, v_{12A} = 3504 (Equation 13-15, 13-16, 13-18, or 13-19)

Flow Entering Diverge Influence Area

	Actual	Max Desirable	Violation?
v_{12}	3504	4400	No

Level of Service Determination (if not F)

Density, $D = 4.252 + 0.0086 v_R - 0.009 L_{12}$ = 20.9 pc/mi/ln

Level of service for ramp-freeway junction areas of influence C

Speed Estimation

Intermediate speed variable, D_S = 0.407

Space mean speed in ramp influence area, S_R = 58.6 mph

Space mean speed in outer lanes, S_0 = 76.0 mph

Space mean speed for all vehicles, S = 64.6 mph
